No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 17, P

TITLE OF INVENTION: Cromosome 17p-Linked Prostate Cancer Susceptibility
TITLE OF INVENTION: Gene and a Paralog and Orthologous Genes
FILE REFERENCE: 2318-258
CURRENT APPLICATION NUMBER: US/09/564,805
CURRENT FILING DATE: 1998-11-06
PRIOR APPLICATION NUMBER: 05 60/107,468
PRIOR APPLICATION NUMBER: 09434,382
PRIOR FILING DATE: 1998-11-05
NUMBER OF SEQ ID NOS: 240
  Chromosome 17p-Linked Prostate Cancer Susceptibility
Gene and a Paralog and Orthologous Genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1486 ATTCGAAATGTCAGTGCCACACTTGTCAACATAAGCCCCGACACGTCTCTGCTACTGGAC 1545

Bqual amounts of plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NCI_CGAP_GCBI) were mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-302087, 682632-687239,
726408-728711, and 729096-731399. Subtraction by Bento
Soares and M. Fatina Bonaldo. "

NCI_CGAP_Carl is a cDNA library containing the following tissue (s): Osteoarthritic Cartilage The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the manner of the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the

/note="Organ: Lung; Vector: pr713-pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I;
UI-CF-ENI is a normalized—CDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand CDNA synthesis was primed with an oligo-dr primer containing a Not I shte. Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligomiclectide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (d7)18 tail. The sequence tag for this library is CTGCTCAGGT.
